ReadRite™ 2.0 — Fact Sheet

Make every word sound right.

Product	ReadRite™ 2.0 — Contextual Pronunciation Intelligence for AI Narration
What it does	Reads the sentence around words spelled the same but said differently (heteronyms), decides which pronunciation the writer meant, and marks it before the text reaches a text-to-speech voice.
Words covered	103 common American English heteronyms, such as read, lead, wind, contract, wound, invalid, record, present, minute and does. Dollar amounts are also written out.
When unsure	Leaves the word as written and flags the sentence in a report with both possible pronunciations (for example, “I read it.”).
Input files	TXT, Word (DOCX), EPUB. The original file is never changed.
Output choices	Same format as the manuscript (respelled); plain text (respelled); SSML pronunciation tags; phoneme text.
Adjusting words	Users type a simple respelling from the 103-word chart, with capitals on the stressed syllable (RED, kun-TRAKT), and convert again. No phonetic alphabet needed.
Test result	Amazon Polly standard voice Joanna mispronounced read, wound and invalid in three test sentences; with ReadRite’s SSML, the same voice said all three correctly. Video: readrite.us/before-and-after/
Platform	Windows; digitally signed by Tim Trott
Price	$19.95, one time, no subscription; one computer per license
Free trial	One script of up to 2,000 words
Released	ReadRite 2.0.0, November 2026
Creator	Tim Trott, author and host of the Author to Author podcast, Florida
